

# PA TEAM

## PAteam Overview

### EXECUTIVE SUMMARY

Truly integrating robot and the human workforce by providing a fully flexible and easy to use interface to create and maintain dialogs.

## ROBOTIC PROCESS AUTOMATION IS OUR THING!

PAteam was born from professionals who have been part of companies that helped bring RPA to the world stage. The whole team is organized around the belief that RPA is the 4th revolution which will exponentially grow productivity, customer service and employee satisfaction. Our focus as a company is to know what our customers want most and what our company does best. And concentrate on where those two meet.

We aim to create a world class organization fully dedicated to realize the full potential of RPA and it's adjacent technologies and to help our customers be the innovative leaders in their own domain. Empowering companies whose thoughts and ideas make them successful, by allowing them to independently take control of what is most important. Helping businesses to be the best versions of themselves!

### Consulting

RPA is a balance between a long term transformative strategy, and the technology to achieve that goal. We partner with our customers to start with the very beginning of the journey. Starting with looking into daily processes of the organization, we help narrow down the first use cases for automation – this is specifically where a lot of failures in RPA start. Taking into consideration the process, budgets, organizational strategy, and other considerations, we build out a journey with our customers. Focusing on partnering with our customers to truly realize their RPA goals,

you won't just get a "Training Session" and a Long PDF thrown at you. We will work with your organization hand in hand to build a working organization which delivers automations and it's promised ROI to truly transform your business.

8000+

Attended and Unattended robots deployed in production

10+

Global Enterprise Customers

100+

Years of RPA experience in various industries

30+

Customers in over 30 different countries across 3 continents.

### Development

Delivering on the high expectation of RPA takes a technically competent team. We built our team from talented individuals who not only focus on RPA, but also bring a unique background and skill to the whole team. We start with individuals who are strong in development, put them through the same training and enablement we scale our customers with, and only when they are ready, do we put them on projects. This means that our customers only work with the best development team who is certified on multiple RPA platforms, built best practices from our deployment of thousands of robots, and has the enablement of real world delivery before working

directly with customers. Even with the strongest automation tool you sometimes face issues with connecting to applications, web services, or gaps in the tool. Our own in-house R&D department with deep knowledge on Robotics and AI, together with a strong relationship with automation vendors enable us to deliver projects within a short time-line.

Reusable  
Maintainable  
Easy to use  
Agile enabled
